CURRENT STATE OF CRISIS INTELLIGENCE

The Problem: Crisis Foresight is Slow, Anchored & Risky

ACAPS monitors 130+ crises globally using bilateral phone calls and qualitative check-ins. Under crisis pressure, this model breaks down across four structural bottlenecks:

⏳ 45-Minute Unstructured Interviews

Frontline humanitarians suffer severe survey fatigue from long bilateral calls. Analysts spend hours collecting subjective text notes instead of calibrated, actionable probability signals.

⚓ Cognitive Anchoring & Groupthink

When experts see an ACAPS baseline rating or dominant peer opinion first, they anchor to the consensus. Vital divergent ground observations get silenced before they can be recorded.

🛡️ Severe Frontline Protection Risks

Responders in hostile or authoritarian conflict zones (Chad, Sudan, Syria, Myanmar) cannot safely attach their real names to political or conflict forecasts without facing physical retaliation.

🕳️ The "Black Hole" Retention Crisis

Experts share hard-won intelligence but never learn how their insight shifted the analysis or if their judgment was accurate. Response rates decay rapidly as experts feel uncredited.

The Bottleneck: 45-min bilateral calls · High survey fatigue · Anchored groupthink · Zero quantitative feedback

UNCALIBRATED & HIGH FRICTION →

DELPHI ELICITATION & PROTECTION PROTOCOL

The Solution: Ground Truth Circle

"Turning 45-minute field interviews into 90-second structured forecasts — without anchoring, groupthink, or fear."

⚡ 90-Second Delphi Forecast Card

Drag a probability slider (5–95%) + choose confidence interval (±4% to ±15%). Asynchronous, mobile-ready, respect responder time. 45-minute calls reduced to 90 seconds.

🔒 "Give-to-Get" Anti-Anchoring Gate

Neither ACAPS ratings nor peer consensus are visible until the responder commits their independent estimate. Eliminates herd bias completely before revealing the collective view.

🔒 4-Tier Anonymity & Retroactive Retreat

Named, Alias, Sealed (ACAPS only), Anonymous. If local conflict escalates, responders downgrade past public footprints with 1 click, protecting life and organizational safety.

💡 Structured Roundtable & Impact Receipts

Debate via structured claims & epistemic reactions (*"Changed my mind"*). When dissent shifts an ACAPS risk wording, an automated private receipt closes the feedback loop.
